The highly anticipated second edition of Collecting Old Maps is completely revised and expanded with over 400 color illustrations. While maintaining the original approach to the nuts and bolts of map collecting, there is new information on collecting in the digital age, building and disposing of a collection, papermaking history, and the mythological figures, symbols and allegory used in cartography. The most significant change to this new edition is the Map Gallery, which is more comprehensive and profusely illustrated in full color. Nearly 200 maps were assembled to illustrate the five-century evolution of printed maps and how they changed both artistically and technically in response to various cultural and market influences. They illustrate the progression from the simple woodcuts of the incunabula period to the elegant copperplate engravings of Renaissance Italy, then to the Baroque Dutch compositions, the refined style of scientific cartographers, and finally the technically advanced, but sometimes whimsical, approach of 20th-century mapmakers. These maps represent a broad range of geographic regions, cartographic importance, and prices. Rather than focusing on the rare and obscure, these are maps that can be collected today.

The origins of the vampire can be traced through oral traditions, ancient texts and archaeological discoveries, its nature varying from one culture to the next up until the 20th century. Three 19th century Irish writers—Charles Robert Maturin, Joseph Sheridan Le Fanu and Bram Stoker—used the obscure vampire of folklore in their fiction and developed a universally recognizable figure, culminating in Stoker's Dracula and the vampire of today's popular culture. Maturin, Le Fanu and Stoker did not set out to transform the vampire of regional folk tales into a global phenomenon. Their personal lives, national concerns and extensive reading were reflected in their writing, striking a chord with readers and recasting the vampire as distinctly Irish. This study traces the genealogy of the modern literary vampire from European mythology through the Irish literature of the 1800s.

Since that ancient day when the first human drew a line connecting Point A to Point B, maps have been understood as one of the most essential tools of communication. Despite differences in language, appearance, or culture, maps are universal touchstones in human civilization. Over the centuries, maps have served many varied purposes; far from mere guides for reaching a destination, they are unique artistic forms, aides in planning commercial routes, literary devices for illuminating a story. Accuracy—or inaccuracy—of maps has been the make-or-break factor in countless military battles throughout history. They have graced the walls of homes, bringing prestige and elegance to their owners. They track the mountains, oceans, and stars of our

existence. Maps help us make sense of our worlds both real and imaginary—they bring order to the seeming chaos of our surroundings. With The Curious Map Book, Ashley Baynton-Williams gathers an amazing, chronologically ordered variety of cartographic gems, mainly from the vast collection of the British Library. He has unearthed a wide array of the whimsical and fantastic, from maps of board games to political ones, maps of the Holy Land to maps of the human soul. In his illuminating introduction, Baynton-Williams also identifies and expounds upon key themes of map production, peculiar styles, and the commerce and collection of unique maps. This incredible volume offers a wealth of gorgeous illustrations for anyone who is cartographically curious. *To which is Now Added a Chart of the Bay and Harbor of New York, with the Soundings of East River, North River, Harlem River, Newark Bay, and New York Bay* Createspace Independent Publishing Platform

The story of an infamous crime, a revered map dealer with an unsavory secret, and the ruthless subculture that consumed him Maps have long exerted a special fascination on viewers—both as beautiful works of art and as practical tools to navigate the world. But to those who collect them, the map trade can be a cutthroat business, inhabited by quirky and sometimes disreputable characters in search of a finite number of extremely rare objects. Once considered a respectable antiquarian map dealer, E. Forbes Smiley spent years doubling as a map thief —until he was finally arrested slipping maps out of books in the Yale University library. The Map Thief delves into the untold history of this fascinating high-stakes criminal and the inside story of the industry that consumed him. Acclaimed reporter Michael Blanding has interviewed all the key players in this stranger-than-fiction story, and shares the fascinating histories of maps that charted the New World, and how they went from being practical instruments to quirky heirlooms to highly coveted objects. Though pieces of the map theft story have been written before, Blanding is the first reporter to explore the story in full—and had the rare privilege of having access to Smiley himself after he'd gone silent in the wake of his crimes. Moreover, although Smiley swears he has admitted to all of the maps he stole, libraries claim he stole hundreds more—and offer intriguing clues to prove it. Now, through a series of exclusive interviews with Smiley and other key individuals,

Blanding teases out an astonishing tale of destruction and redemption. The Map Thief interweaves Smiley's escapades with the stories of the explorers and mapmakers he knew better than anyone. Tracking a series of thefts as brazen as the art heists in Provenance and a subculture as obsessive as the oenophiles in The Billionaire's Vinegar, Blanding has pieced together an unforgettable story of high-stakes crime.

Antique Maps Richard Di Giacomo

The period between the French Revolution and the Second World War saw an unprecedented proliferation of mapmaking and map reading across modern European society. This book explores the age of cartophilia through the story of mapmaking in the disputed French-German borderland of Alsace-Lorraine. During the nineteenth and twentieth centuries, both French and Germans claimed Alsace-Lorraine as part of their national territories, fighting several bloody wars with each other that resulted in four changes to the borderland's nationality. In the process, the contested territory became a mapmaker's laboratory, a place subjected to multiple visual interpretations and competing topographies. And the mapmakers were not just professional border surveyors but rather people from all walks of life, including linguists, ethnographers, historians, priests, and schoolteachers. Empowered by their access to affordable new printing technologies and motivated by patriotic ideals, these popular mapmakers redefined the meaning and purpose of European borders during the age of nationalism."

This book provides research that shows tropical cyclones are more powerful than in the past with the most dramatic increases occurring over the North Atlantic and with the strongest hurricanes. Although such increases are correlated with warming oceans and are consistent with the thermodynamic theory of hurricane intensity, there remains doubt about the interpretation, integrity, and meaning of these results. Arising from the 5th International Summit on Hurricanes and Climate Change, this book contains new research on topics related to hurricanes and climate change. Bringing together international leading academics and researchers on various sides of the debate, the book discusses new research and expresses opinions about what is happening and what might happen in the future with regard to regional and global hurricane (tropical cyclone) activity.
