Many students view archaeological theory as a subject distinct from field research. This division is reinforced by the way theory is taught, often in stand-alone courses that focus more on logic and reasoning than on the application of ideas to fieldwork. Divorcing thought from action does not convey how archaeologists go about understanding the past. This book bridges the gap between theory and practice by looking in detail at how the authors and their colleagues used theory to interpret what they found while conducting research in northwest Honduras. This is not a linear narrative. Rather, the book highlights the open-ended nature of archaeological investigations in which theories guide research whose findings may challenge these initial interpretations and lead in unexpected directions. Pursuing those novel investigations requires new theories that are themselves subject to refutation by newly gathered data. The central case study is the writers' work in Honduras. The interrelations of fieldwork, data, theory, and interpretation are also illustrated with two long-running archaeological debates, the emergence of inequality in southern Mesopotamia and inferring the ancient meanings of Stonehenge. The book is of special interest to undergraduate Anthropology/Archaeology majors and first- and second-year graduate students, along with anyone interested in how archaeologists convert the static materials we find into dynamic histories of long-vanished people.

It is the definitive resource for understanding how to think about archaeology. *Temporality in Qualitative Inquiry* Routledge

Theory in Africa, Africa in Theory explores the place of Africa in archaeological theory, and the place of theory in African archaeology. The centrality of Africa to global archaeological thinking is highlighted, with a particular focus on materiality and agency in contemporary interpretation. As a means to explore the nature of theory itself, the volume also addresses differences between how African models are used in western theoretical discourse and the use of that theory within Africa. Providing a key contribution to theoretical discourse through a focus on the context of theory-building, this volume explores how African modes of thought have shaped our approaches to a meaningful past outside of Africa. A timely intervention into archaeological thought, Theory in Africa, Africa in Theory deconstructs the conventional ways we approach the past, positioning the continent within a global theoretical discourse and blending Western and African scholarship. This volume will be a valuable resource for those interested in the archaeology of Africa, as well as providing fresh perspectives to those interested in archaeological theory more generally.
