Adults with Asthma John Wiley & Sons
 Pediatric respiratory disorders are responsible for a number of acute and chronic health conditions and are a leading cause of pediatric emergency room visits and hospitalizations. More than ever, nurses and nurse practitioners must have an understanding of the anatomy, pathophysiology, diagnosis and state of the art treatments in pediatric respiratory disease as

they are often the first to come in contact with and recognize respiratory problems in children. Nursing Care in Pediatric Respiratory Disease seeks to provide both nurses and nurse practitioners with this information in order to aid them in the diagnosis and treatment of children suffering from acute and chronic respiratory disorders. Nursing Care in Pediatric Respiratory Disease opens with an overview of the anatomy and physiology of the respiratory system, best practices for

assessing respiratory symptoms in children, and common respiratory therapies and treatment methods. It then proceeds through an examination of varying acute and chronic upper and lower respiratory diseases spanning from asthma and cystic fibrosis to vocal cord paralysis and sinusitis in both hospital and ambulatory settings. Nursing Care in Pediatric Respiratory Disease provides nurses and other health care providers with a comprehensive and practical resource which

allows them to collaborate and advocate more effectively, as well as educate both the family and child in management of respiratory disorders. *Nursing Clinics of North America*, Springer Science & Business Media

Severe asthma is a form of asthma that responds poorly to currently available medication, and its patients represent those with greatest unmet needs. In the last 10 years, substantial progress has been made in terms of understanding some of the mechanisms

that drive severe asthma; there have also been concomitant advances in the recognition of specific molecular phenotypes. This ERS Monograph covers all aspects of severe asthma – epidemiology, diagnosis, mechanisms, treatment and management – but has a particular focus on recent understanding of mechanistic heterogeneity based on an analytic approach using various ‘omics platforms applied to clinically well-defined asthma cohorts. How

these advances have led to improved management targets is also emphasised. This book brings together the clinical and scientific expertise of those from around the world who are collaborating to solve the problem of severe asthma.

Medicine management is an important and demanding aspect of nursing practice. It requires both clinical knowledge and the use of professional judgement.

This accessible book is designed to help both practising and student nurses prepare to deal with the challenges of medicine management. It covers the principles and skills involved in a range of common medicine management scenarios and will help nursing students integrate their knowledge of physiology, pathophysiology, pharmacology and nursing care. This handy book: Is based on 21 practical case studies, which help you learn about effective medicine

management and test your understanding of essential drug groups. Helps you gain confidence in your knowledge of pharmacology Highlights the nurse's role in identifying the therapeutic and adverse effects of medicines on a patient Part of the Case Book series, Medicine Management for Nurses Case Book offers a unique way of relating theory to practice. The cases are ideal for preparing for exams, tests and working in practice, as each one includes self-test

questions and answers. Whether you are preparing to qualify or studying medicine management after qualification, this case book is the ideal practical tool for you. Contributors: Diane Blundell, Abe Ginourie, Joy Parkes, Ruth Sadik, Pat Talbot, Janine Upton, Traci Whitfield, Christine Whitney-Cooper, Debbie Wyatt. "The book offers a unique and engaging approach to an important subject that most students find daunting. Realistic case scenarios are used as a

catalyst to introduce information and concepts that underpin practice. The presentation style supports the active participation of the student with the inclusion of questions at the beginning of each topic offering a platform to explore key areas whilst referring to the scenario. I highly recommend it to pre-registered student nurses." Kris Paget, Senior Lecturer, Faculty of Health, Social Work and Education, Kingston University, UK "This collection of case studies

provides a unique and user friendly guide to commonly seen pharmacological therapies and treatment options across the lifespan. The case studies have been carefully selected to provide the diverse care needs of complex disease processes in a person centred way. Each case study is relevant to the role of the Nurse and will provide essential and core information whether nurses are working in either a medical or surgical clinical setting. Government Health Care

Directives provide the essential clinical evidence based theory necessary to promote medicine adherence and each chapter provides the relevant pathophysiology which is essential to underpin the safe administration of medication therapies. The role of the nurse in medicine management with respect to patient education and the professional responsibilities of monitoring and evaluating complex medication therapies is presented in

each case study. This provides an holistic approach to the care of patients receiving complex medication therapies." Barry Ricketts, Senior Lecturer, Adult Nursing, Oxford Brookes University, UK

 There is growing interest in the pronounced variability in the incidence and severity of chronic respiratory diseases such

as Asthma, observed to occur in any particular patient over a given period of time. It is now known that acute exacerbations are multi-factorial in origin, with pollution, allergens and viruses all implicated, and effective treatment requires a similarly complex approach that addresses each of the component causes. In this new volume, leading authorities review what is known of these causative factors and the mechanisms by which they exacerbate the

symptoms of pulmonary disease both singly and in combination. The authors evaluate the individual efficacy of current treatments in the light of this knowledge and present new recommendations for formulating effective therapeutic regimens.

children and is a leading cause for their hospitalization. Despite its negative health impact, a local survey has shown that children with asthma as well as their parents have a lack of understanding for asthma management (Wong, Wong, Chung & Lau, 2001). However, to help asthmatic children to better cope with their condition, it is important for health care professional such as nurses to enhance their knowledge in asthma management. Recent

empirical research has shown that education promoting knowledge of asthma management can improve health outcomes in asthmatic children. Therefore, it is important to develop an evidence-based asthma education guideline for them. This dissertation aims to evaluate the empirical evidence of the education program for asthmatic children, with the age ranging from 5 to 18, and their parents. The goal of the proposed program is to reduce their re-hospitalization rate by

enhancing their knowledge of asthma care. A translational nursing research was conducted and 10 studies focusing on asthma education program for children and their parents were identified from electronic databases. Critical appraisal was performed using the recognized assessment tool, named the Scottish Intercollegiate Guidelines Network (SIGN) (2008). Recommendations were developed based on the data extracted from the review. Based on the

literatures reviewed, it was found that a 45-to-60 minute one-to-one educational intervention conducted by nurses using self-management plan is the most effective method for improving the health outcomes for asthmatic children. A plan of translating the empirical information extracted from the review into practice was developed and the potential of implementation was assessed. Based on the assessment, it was found that there is high

transferability of the findings from the review and the proposed innovation is feasible in the selected clinical setting. In addition, the benefits generated from the proposed innovation also outweigh its cost. An evidence-based guideline was then developed based on the high and medium level of evidence. The grades of the recommendation were stated as well. A comprehensive communication plan targeting on various stakeholders was

prepared. A pilot study was designed to examine the feasibility of the proposed innovation before the full-scale implementation. The outcomes of the proposed innovation include the re-hospitalization rate of asthmatic children, the patients' and nurses' level of knowledge in asthma care, the satisfactory level of patients and nurses towards the innovation, the competency of nurses in conducting the innovation, and the utilization rate and the cost of the innovation.

They would be evaluated using appropriate methodologies. The proposed innovation would be considered as effective if the primary outcome, the re-hospitalization rate of asthmatic children is reduced. DOI: 10.5353/th_b4833598

 The purpose of this paper
 is to point out that patient

"Essentials of Correctional Nursing is the first new and comprehensive text about this growing field to be published in the last decade. Fortunately, the editors have done a great job in all respects...This book should be required reading for all medical practitioners and administrators working in jails or prisons. It certainly belongs on the shelf of every nurse, physician, ancillary healthcare

professional and corrections administrator."--Corhealth (The Newsletter of the American Correctional Health Services Association) "I highly recommend Essentials of Correctional Nursing, by Lorry Schoenly, PhD, RN, CCHP-RN and Catherine M. Knox, MN, RN, CCHP-RN, editors. This long-awaited book, dedicated to the professional specialty of correctional nursing, is not just a good read, it is one of those books that stays on your desk and may never make it to the

bookshelf."--American Jails "Correctional nursing has minimal published texts to support, educate, and provide ongoing bestpractices in this specialty. Schoenly and Knox have successfully met those needs with Essentialsof Correctional Nursing."--Journal of Correctional Health Care Nurses have been described as the backbone of correctional health care. Yet the complex challenges of caring for this disenfranchised population are many.

Ethical dilemmas around issues of patient privacy and self-determination abound, and the ability to adhere to the central tenet of nursing, the concept of caring, is often compromised. Essentials of Correctional Nursing supports correctional nurses by providing a comprehensive body of current, evidence-based knowledge about the best practices to deliver optimal nursing care to this population. It describes how nurses can apply their knowledge and skills to assess the full

range of health conditions presented by incarcerated individuals and determine the urgency and priority of requisite care. The book describes the unique health needs and corresponding care for juveniles, women, and individuals at the end of life. Chapters are devoted to nursing care for patients with chronic disease, infectious disease, mental illness, or pain, or who are in withdrawal from drugs or alcohol. Chapters addressing health screening, medical

emergencies, sick call, and dental care describe how nurses identify, respond to, and manage these health care concerns in the correctional setting. The Essentials of Correctional Nursing was written and reviewed by experienced correctional nurses with thousands of hours of experience. American Nurses Association standards are woven throughout the text, which provide the information needed by nurses studying for certification exams in

correctional nursing. The text will also be of value to nurses working in such settings as emergency departments, specialty clinics, hospitals, psychiatric treatment units, community health clinics, substance abuse treatment programs, and long-term care settings, where they may encounter patients who are currently or have previously been incarcerated. Key Features: Addresses legal and ethical issues surrounding correctional nursing Covers common

inmate-patient health care concerns and diseases Discusses the unique health needs of juveniles, women, and individuals at the end of life Describes how nurses can safely navigate the correctional environment to create a therapeutic alliance with patients Provides information about health screening, medical emergencies, sick call, and dental care Serves as a core resource in the preparation for correctional nursing certification exams
