The "Qatar papers" reveal the mapping of proselytism in France and Europe led by Qatar Charity, the most powerful Qatari NGO. These confidential documents, disclosed for the first time, detail most of the 140 projects to finance mosques, schools and Islamic centres, for the benefit of associations linked to the Muslim Brotherhood. They reveal the salary paid to Tariq Ramadan, a figure of political Islam that Doha sponsors outside its borders. At the end of a survey in six European countries and a dozen cities in France, the authors expose the concealment, sometimes the double language, of Muslim associations on their foreign funding, as well as the ostrich policy followed by many mayors, out of electoralism or ignorance. They point out the absurdity of the situation: with the faithful's money alone as a subsidy, how could mosques in France deprive themselves of aid from abroad? A journey behind-the-scenes of a wealthy and opaque NGO linked to the

top of the Qatari state, as revealed by its funding by several members of the ruling family, the Al Thani.

Organizations can use the valuable tool of data envelopment analysis (DEA) to make informed decisions on developing successful strategies, setting specific goals, and identifying underperforming activities to improve the output or outcome of performance measurement. The Handbook of Research on Strategic Performance Management and Measurement Using Data Envelopment Analysis highlights the advantages of using DEA as a tool to improve business performance and identify sources of inefficiency in public and private organizations. These recently developed theories and applications of DEA will be useful for policymakers, managers, and

practitioners in the areas of sustainable development of our society including environment, agriculture, finance, and higher education sectors.

Performance-based assessments have become a critical component of every teacher education program. Such assessments allow teacher candidates to demonstrate their content and pedagogical knowledge, skills, and dispositions in an authentic setting.

Evaluating Teacher Education Programs through Performance-Based Assessments analyzes and discusses the theory and concepts behind teacher education program evaluation using assessment tools such as lesson plans, classroom artifacts, student work examples, and video recordings of lessons. Emphasizing critical real-world examples and empirically-based studies, this research-based publication is an ideal reference source for university administrators, teacher educators, K-12 leaders, and graduate students in the field of education.

In this much-needed book, Graham Dunkley challenges the oft-repeated notion that free trade and global integration are the best means of development for all nations at all times – an idea that has proved even more misguided in the wake of the global financial crisis. By contrast, Dunkley reveals – through a wide range of statistical analysis and case studies – that at best the evidence is mixed. Looking systematically at issues such as trade-led growth, supply chains and

financialization, *One World Mania* reveals the many problems that over-globalization has caused, often at great human cost. An indispensable guide for anyone wishing to understand the shortcomings of current global economic policies.

American State Papers Linköping University Electronic Press

The standard incandescent light bulb, which still works mainly as Thomas Edison invented it, converts more than 90% of the consumed electricity into heat. Given the availability of newer lighting technologies that convert a greater percentage of electricity into useful light, there is potential to decrease the amount of energy used for lighting in both commercial and residential applications. Although technologies such as compact fluorescent lamps (CFLs) have emerged in the past few decades and will help achieve the goal of increased energy efficiency, solid-state lighting (SSL) stands to play a large role in dramatically decreasing U.S. energy consumption for lighting. Since the publication of the 2013 National Research Council report *Assessment of Advanced Solid-State Lighting*, the penetration of SSL has increased dramatically, with a resulting savings in energy and costs that were foreshadowed by that study. What was not anticipated then is the dramatic dislocation and restructuring of the SSL marketplace, as cost reductions for light-emitting diode (LED) components reduced profitability for LED manufacturers. At the same time, there has been the emergence of new applications for SSL, which have the potential to create new markets and commercial opportunities for the SSL industry. *Assessment of Solid-State*

Lighting, Phase Two discusses these aspects of change – highlighting the progress of commercialization and acceptance of SSL and reviewing the technical advances and challenges in achieving higher efficacy for LEDs and organic light-emitting diodes. This report will also discuss the recent trends in SSL manufacturing and opportunities for new applications and describe the role played by the Department of Energy (DOE) Lighting Program in the development of SSL.

 Demonstrating the latest research and analysis in the area of through-life engineering services (TES), this book utilizes case studies and expert analysis from an international array of practitioners and researchers – who together represent multiple manufacturing sectors: aerospace, railway and automotive – to maximize reader insights into the field of through-life engineering services. As part of the EPSRC Centre in Through-life Engineering Services program to support the academic and industrial community, this book presents an overview of non-destructive testing techniques and applications and provides the reader with the information needed to assess degradation and possible automation of through-life engineering service activities. The latest developments in maintenance-repair-overhaul (MRO) are presented with emphasis on cleaning technologies, repair and overhaul approaches and planning and digital assistance. The impact of these technologies on sustainable enterprises is also analyzed. This book will help to support the existing TES community and will provide future studies with a strong base from which to analyze and apply technological trends to real world

examples.

This review assesses the overall investment climate in the Philippines, looking at investment policy, investment promotion and facilitation, competition policy, infrastructure investment and responsible business conduct.

One World Mania Bloomsbury Publishing
 This volume explores the significant connections between the Quaker community and the abolitionist cause in America. The case studies that make up the collection mainly focus on the

greater Philadelphia area, a hotbed of the abolitionist movement and the location of the first American abolition society founded in 1775. Despite the importance of Quakers to the abolitionist movement, their significance has been largely overlooked in the existing historiography. These studies will be of interest to scholars of slavery and abolition, religious history, Atlantic studies and American social and political history.

The European Union and Deprivation of Liberty examines the EU legislative and judicial approach to deprivation of liberty from the perspective of the following fundamental rights and principles: the principle of legality and proportionality of penalties; the right to liberty; and the principle that criminal penalties must aim for the social reintegration of the offenders. The book measures the relevant EU law against those rights; this constitutes the very core of the relationship between public powers and individual liberty. The analysis shows that the ultimate goal of the Union is the creation and preservation of the EU as a borderless area. The holistic approach adopted in the book explains how different legal phenomena connected to deprivation of liberty have come into being in EU law. It also shows that those phenomena call for solutions suitable for the peculiarities of the EU legal order.

This book constitutes the refereed proceedings of the 10th Conference on Computability in Europe, CiE 2014, held in Budapest, Hungary, in June 2014. The 42 revised papers presented were carefully reviewed and selected from 78 submissions and included together with 15 invited papers in this proceedings.

The conference had six special sessions: computational linguistics, bio-inspired computation, history and philosophy of computing, computability theory, online algorithms and complexity in automata theory.

Annual Report of the Commissioner of Patents to the Secretary of Commerce for the Fiscal Year Ended ... Routledge

This book constitutes the thoroughly refereed post-conference of the 12th International Symposium on Computer Music Modeling and Retrieval, CMMR 2016, held in São Paulo, Brazil, in July 2016. The 22 full papers presented were carefully reviewed and selected from 40 submissions. This year's conference theme "Bridging People and Sound" aimed at encouraging contributions from artists and listeners on the one side and audio and music technology researchers on the other.

Libya's Fragmentation Springer

In 'Making Kids Cleverer: A manifesto for closing the advantage gap', David Didau reignites the nature vs. nurture debate around intelligence and offers research-informed guidance on how teachers can help their students acquire a robust store of knowledge and skills that is both powerful and useful. Foreword by Paul A. Kirschner. Given the choice, who wouldn't want to be cleverer? What teacher wouldn't want this for their students, and what parent wouldn't wish it for their children? When David started researching this book, he thought the answers to the above were obvious. But it turns out that the very idea of measuring and increasing children's

intelligence makes many people extremely uncomfortable: If some people were more intelligent, where would that leave those of us who weren't? The question of whether or not we can get cleverer is a crucial one. If you believe that intelligence is hereditary and environmental effects are trivial, you may be sceptical. But environment does matter, and it matters most for children from the most socially disadvantaged backgrounds those who not only have the most to gain, but who are also the ones most likely to gain from our efforts to make all kids cleverer. And one thing we can be fairly sure will raise children's intelligence is sending them to school. In this wide-ranging enquiry into psychology, sociology, philosophy and cognitive science, David argues that with greater access to culturally accumulated information taught explicitly within a knowledge-rich curriculum children are more likely to become cleverer, to think more critically and, subsequently, to live happier, healthier and more secure lives.;Furthermore, by sharing valuable insights into what children truly need to learn during their formative school years, he sets out the numerous practical ways in which policy makers and school leaders can make better choices about organising schools, and how teachers can communicate the knowledge that will make the most difference to young people as effectively and efficiently as possible. David underpins his discussion with an exploration of the evolutionary basis for learning and also untangles the forms of practice teachers should be engaging their students in to ensure that they are acquiring expertise, not just consolidating mistakes and misconceptions. There are so many competing suggestions as to how we

should improve education that knowing how to act can seem an impossible challenge. Once you have absorbed the arguments in this book, however, David hopes you will find the simple question that he asks himself whenever he encounters new ideas and initiatives Will this make children cleverer? as useful as he does.;Suitable for teachers, school leaders, policy makers and anyone involved in educations

OECD Investment Policy Reviews: Philippines 2016 0000000000(0000)0000
CIE IGCSE Chinese (0523) Second Language 2014 Paper 1 Analyzes in details

This book analyses energy transitions and the opportunities and challenges for building sustainable energy systems to improve human capabilities while protecting the environment. Sufficient and secure energy supply is critical to human thriving and socioeconomic development. Yet energy systems are also implicated in the most pressing socio-environmental challenges of our time - climate change, air pollution, and water and land use. This book examines what is arguably the most ambitious vision for a renewable energy based system worldwide. This vision, often called Desertec, is for a regional electricity system supplying North Africa, Europe, and the Middle East with sustainable and affordable power. The behemoth plan would entail building dozens of large-scale solar and wind power plants mostly in North Africa, interconnecting the fragmented transmission infrastructure of 38 Mediterranean countries, and linking North Africa to the European Union (EU) through undersea transmission cables. Within the Mediterranean, the book focuses on Morocco, which is one of the most advanced developing countries in

renewable energy scale-up, to understand its motivations for building renewable energy and the effects on sustainable development. The book therefore takes a unique multi-scalar approach to understanding the social and political aspects of energy transitions, weaving together the views of villagers living near Morocco's first solar energy zone with the perspectives of national decision-makers in Morocco with the views of European policymakers and major transnational energy companies in the Mediterranean region. This book will be of great interest to students, scholars and policymakers interested in energy transitions, sustainable and renewable energy, Mediterranean politics, sustainable development and environment and sustainability more generally.

Phase Two National Academies Press
Cambridge IGCSE Chinese - Second Language (0523) Cambridge IGCSE Chinese as a Second Language is designed for learners who already have a working knowledge of the language and who want to consolidate their understanding to progress their education or career. Through their studies, learners achieve a thorough understanding of a wide range of registers and styles and learn to communicate appropriately in different situations. The syllabus focuses on the linked language skills of reading, writing, listening and oral communication. Through their study of Cambridge IGCSE Chinese as a Second Language, learners can achieve a level of practical communication ideal for everyday use, which can also form the basis for further, more in-depth language study. By referring to Cambridge IGCSE Chinese, Edexcel IGCSE Chinese (another two

examination board) and HSK (Chicness Proficiency Test), combining our 25 years' experience in Teaching and editing our own materials. Here is the "LIFE SAVING" book called by many students for their exams. It takes our years' painful effort to edit. The book give a quick revision for your coming exam! Grab it!
