Perfecting the American Steam Locomotive documents the role played by mechanical engineers in the development of locomotive design. The steam engine and the mechanical engineering profession both grew directly out of the Industrial Revolution's need for sources of power beyond that of men and animals. Invented in England when coal mining was being developed, the practical steam engine eventually found numerous applications in transportation, especially in railroad technology. J. Parker Lamb traces the evolution of the steam engine from the early 1700s through the early 1800s, when the first locomotives were sent to the United States from England. Lamb then shifts the scene to the development of the American steam locomotive, first by

numerous small builders, and later, by the early 20th century, by only three major enterprises and a handful of railroad company shops. Lamb reviews the steady progress of steam locomotive technology through its pinnacle during the 1930s, then discusses the reasons for its subsequent decline.

Straminipilous Fungi presents a critical comparative review of the morphology and ultrastructure, morphogenesis, cytology, molecular biology and evolution of the biflagellate fungi. These organisms encompass the fungi formerly called oomycetes; taxonomically related heterotrophs studied by mycologists; plasmodiophorids and other heterotrophs. Appropriate comparisons are made with chromophyte algae, marine heterotrophs and chytridiaceous fungi. Little-known taxa which have been referred to the various orders of flagellate fungi are also listed together with citations. A new hierarchical classification is presented which is supported by systematic accounts and synoptic keys. Dichotomous keys based on habitat and habit are given to all known species of lagenidiaceous fungi, labyrinthulids and plasmodiophorids. A unique 'one stop' reference resource for plant pathologists is provided by the binominal lists, including host-related lists for the downy mildews. The book, including ca 4000 references, is a major text for post-graduate and research workers, particularly freshwater and marine biologists, soil ecologists and plant

pathologists.
