The capability (maximum acceptable value) of the fiber cable to receive light through its core is determined by its numerical aperture (NA). $NA = \sin \alpha = \sqrt{n_1^2 - n_2^2}$ Reference Guide to Fiber Optic Testing - LASER -

TEC The fiber type is closely related to the diameter of the core and cladding. Types of glass fiber. Multimode fiber, due to its large core, allows for the transmission of light using different paths (multiple modes) along the link. For this reason, multimode fiber is quite sensitive to modal dispersion. Reference Guide to Fiber Optic Testing Visual inspection is the only way to determine if fiber connectors are truly clean before mating them. The JDSU video fiber inspection probe and

handheld display system is used to quickly and easily inspect connector end faces, which ultimately minimizes signal loss and optimizes test conditions.
