Private

Secondary

Schools is

everything

parents need

to find the

right private

secondary

school for

their child. This valuable resource allows students and parents to compare and select from more than 1,500 schools in the U.S. and Canada, and around the world. Schools featured include independent day schools, special needs schools, and boarding schools (including junior boarding schools for middle-school students). Helpful information listed for each of these

schools include: school's area of specialization, setting, affiliation, accreditation, tuition, financial aid, student body, faculty, academic programs, social life, admission information, contacts, and more. Also includes helpful articles on the merits of private education, planning a successful school search, searching for private schools online, finding the perfect match,

paying for a private education, tips for taking the necessary standardized tests, semester programs and understanding the private schools' admission application form and process. *Private Secondary Schools* Peterson's Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice. Focussing its

discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial effects on learning and teaching, the question of how these effects are to be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching

hindered by poverty and social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of data, collected in a South African mathematics classroom. In the second part, each of these teams makes a specific proposal about what can be done and how so that its research-generated insights have a tangible,

beneficial impact on what is happening in mathematical classrooms. Combining two discourses – that of researchers speaking to one another, and that of researchers communicating their insights to those responsible for educational practice – the book deals with the perennial question of communication between those who study educational processes and those who are

<p>directly responsible for teacher education, educational research and classroom practices. This book will be key reading for postgraduates, researchers and academics in education and particularly in the areas of mathematics education, education research, teacher education and classroom practice. It will also appeal to teacher educators, practitioners and undergraduat</p>	<p>e students interested in educational research. <i>Canadian Education and Research Digest</i> CRC Press This proceedings volume brings together peer-reviewed papers presented at the International Conference on Information Technology and Computer Application Engineering, held 10-11 December 2014, in Hong Kong, China.  “Although standards-based reform emerged in the United States and the United Kingdom, the idea has

spread across the world, as an approach to systemic reform. It might appear that there is a world-wide “tsunami” of standards-based reform that will standardize and homogenize the educational system across the globe. This volume makes it very clear, however, that there is no one approach to standards-based reform and countries change – there is a danger in paying attention to its

evolution and impact in only one context. That’s what makes this volume so valuable. Louis Volante has drawn together descriptions from a wide range of countries, all involved in large-scale reform and using standards and assessments as part of their process. What becomes very obvious is that the language may be the same but the words reflect different contexts and can represent very different

ideals, values, and processes. I'm sure you will find this book as interesting and challenging as I have – a gem that pushes your thinking and does not allow readers to remain neutral.”

FriesenPress This volume presents research from a variety of perspectives on the enhancement of human intelligence. It is organized around five themes - enhancement via instruction; enhancement via development (over the life cycle); enhancement over time; enhancement via new constructs; and new directions in enhancement.

Three key issues are addressed: First, although most of the scientific research on intelligence has concerned what it is, this volume attends to the consequential societal and economic issue concerns of whether it can be increased, and how. Second, intellectual enhancement is particularly important when targeted to minorities and the poor, groups that have typically performed relatively less well on

intelligence and achievement measures. This volume reflects the education community's ongoing interest in understanding , and attempting to close, achievement or test score gaps. Third, most of the attention to examining intellectual enhancement, and in accounting for and closing the test-score gap, has focused on general cognitive ability. In line with the

current emphasis on considering intelligence from a wider perspective, this volume includes constructs such as emotional and practical intelligence in definitions of intellectual functioning. Extending Intelligence: Enhancement and New Constructs is an essential volume for researchers, students, and professionals in the fields of educational psychology, intelligence, educational measurement

and assessment, and critical thinking.
