BAA Limited owns and operates seven UK airports: Heathrow, Gatwick, Stansted, Southampton, Glasgow, Edinburgh and Aberdeen. They handle nearly 150 million passengers a year, and are a vital part of the country's transport infrastructure. In the light of the Office of Fair Trading's referral of BAA to the Competition Commission, to investigate whether BAA's market position was limiting competition in the UK aviation sector, the Committee set up its own inquiry. It particularly wanted to consider: the regulatory framework; the quality of service provided; the size and quality of investment; any consequences

following the acquisition of BAA by Ferrovial; the implications of further runway and terminal capacity; how more competition could be introduced into the market. The Committee concludes that the drawbacks of common ownership outweigh the advantages, and identifies a problem with service quality. It believes that increased competition is possible, and hopes the Competition Commission will ensure a healthy, competitive airport sector for the future.

How to Capture Readers and Keep Them Engaged

Whitepapersource Pub
The Government recognises that many lifestyle-driven health problems are at

alarming levels: obesity; high rates of sexually transmitted infections; a relatively large population of drug users; rising levels of harm from alcohol; 80,000 deaths a year from smoking; poor mental health; health inequalities between rich and poor. This white paper outlines the Government's proposals to protect the population from serious health threats; help people live longer, healthier and more fulfilling lives; and improve the health of the poorest. It aims to empower individuals to make healthy choices and give communities and local government the freedom, responsibility and funding to innovate and develop ways of improving public health

in their area. The paper responds to Sir Michael Marmot's strategic review of health inequalities in England post 2010 - "Fair society, healthy lives" (available at <http://www.marmotreview.org/AssetLibrary/pdfs/Reports/FairSocietyHealthyLives.pdf>) and adopts its life course framework for tackling the wider social determinants of health. A new dedicated public health service - Public Health England - will be created to ensure excellence, expertise and responsiveness, particularly on health protection where a national response is vital. The paper gives a timetable showing how the proposals will be implemented and an annex sets out a vision of the role of the Director of Public

Health. The Department is also publishing a fuller story on the health of England in "Our health and wellbeing today" (http://www.dh.gov.uk/prod_consum_dh/groups/dh_digitalassets/@dh/@en/@ps/documents/digitalasset/dh_122238.pdf), detailing the challenges and opportunities, and in 2011 will issue documents on major public health issues. This white paper aims to provide Northern and Southern Development partners

and decision-makers with a better understanding of a) why spillover of disease from wildlife to humans occurs, and why these zoonotic disease outbreaks can spread and become epidemics and pandemics such as COVID-19 and b) what they can do to prevent, detect and respond to future spillover events, with a special focus on priority interventions at the human-wildlife-livestock interfaces. It has been produced as part of the Sustainable Wildlife Management (SWM) Programme, which will deliver critical lessons on how to prevent, detect and respond to future spillover events with appropriate national and transboundary policies and practices in the context of the

SWM partner sites. The SWM Programme is a major international initiative to improve the conservation and sustainable use of wildlife in forest, savannah and wetland ecosystems. Field projects are being implemented in 13 African, Caribbean and Pacific countries. The aim is to: improve how wildlife hunting is regulated; increase the supply of sustainably produced meat products and farmed fish; strengthen the management capacities of indigenous and rural communities; and reduce demand for wild meat, particularly in towns and cities. It is being implemented by a dynamic consortium of four partners with expertise in wildlife conservation and food

security: Food and Agriculture Organization of the United Nations (FAO), Center for International Forestry Research (CIFOR), French Agricultural Research Centre for International Development (CIRAD) and Wildlife Conservation Society (WCS). For more information, please visit the SWM Programme website: www.swm-programme.info.

A fast and easy way to write winning white papers! Whether you're a marketing manager seeking to use whitepapers to promote your business, or a copywriter keen to

break into this well-paying field, *White Papers For Dummies* gives you a wealth of practical, hands-on advice from one of the world's leading experts in the field. The fact-based documents known as white papers have been called the "king of content." No other B2B marketing piece can do more to generate leads, nurture prospects, and build mindshare. Where white papers were once used only by technology firms, they are becoming "must-have" items in the marketing toolkit for almost any B2B firm. Practically every startup must produce a white paper as part of its business planning. But writing effective white papers is a big challenge. Now you can benefit from

the experience of a white paper specialist who's done more than 200 projects for clients from Silicon Valley to Finland, from mighty Google to tiny startups. Author Gordon Graham—also known as That White Paper Guy—provides dozens of tips and tricks to help your project come together faster and easier. *White Papers For Dummies* will help you to: Quickly determine if your B2B firm could benefit from a white paper Master the three phases of every white paper project: planning, production, and promotion Understand when and how to use the three main types of white paper Decide which elements to include and which to

leave out Learn the best practices of seasoned white paper researchers and writers Choose from 40 different promotional tactics to get the word out Avoid common mistakes that many beginners make *Parliamentary Debates* Routledge Dated May 2016. Cite them right The Stationery Office Safety has traditionally been defined as a condition where the number of adverse outcomes was as low as possible (Safety-I). From a Safety-I perspective, the purpose of safety management is to make sure that the

number of accidents and incidents is kept as low as possible, or as low as is reasonably practicable. This means that safety management must start from the manifestations of the absence of safety and that - paradoxically - safety is measured by counting the number of cases where it fails rather than by the number of cases where it succeeds. This unavoidably leads to a reactive approach based on responding to what goes wrong or what is identified as a risk - as something that could go wrong. Focusing on what goes right, rather than on what goes wrong, changes the definition of safety from 'avoiding that something goes wrong' to 'ensuring that

everything goes right'. More precisely, Safety-II is the ability to succeed under varying conditions, so that the number of intended and acceptable outcomes is as high as possible. From a Safety-II perspective, the purpose of safety management is to ensure that as much as possible goes right, in the sense that everyday work achieves its objectives. This means that safety is managed by what it achieves (successes, things that go right), and that likewise it is measured by counting the number of cases where things go right. In order to do this, safety management cannot only be reactive, it must also be proactive. But it must be proactive with regard to how actions

succeed, to everyday acceptable performance, rather than with regard to how they can fail, as traditional risk analysis does. This book analyses and explains the principles behind both approaches and uses this to consider the past and future of safety management practices. The analysis makes use of common examples and cases from domains such as aviation, nuclear power production, process management and health care. The final chapters explain the theoretical and practical consequences of the new perspective on the level of day-to-day operations as well as on the level of strategic management (safety culture). Safety-I and Safety-II is written for all

professionals responsible for their organisation's safety, from strategic planning on the executive level to day-to-day operations in the field. It presents the detailed and tested arguments for a transformation from protective to productive safety management.

This book is a new look at one of the hottest topics in contemporary science, Dark Matter. It is the pioneering text dedicated to sterile neutrinos as candidate particles for Dark Matter, challenging some of the standard assumptions which may be true for some Dark Matter candidates but not for all. So, this can be seen either as an introduction to a specialized topic or an out-of-the-box introduction to the field of Dark Matter in general. No matter if you are a theoretical particle physicist, an observational astronomer, or a ground based experimentalist, no matter if you are a grad student or an active researcher, you can benefit from this text, for a simple

reason: a non-standard candidate for Dark Matter can teach you a lot about what we truly know about our standard picture of how the Universe works.

The Past and Future of Safety Management

William S. Hein & Co., Inc.

How should we strike a balance between the benefits of centralized and local governance, and how important is context to selecting the right policy tools? This uniquely broad overview of the field illuminates our

understanding of environmental federalism and informs our policy-making future. Professor Kalyani Robbins has brought together an impressive team of leading environmental federalism scholars to provide a collection of chapters, each focused on a different regime. This review of many varied approaches, including substantial theoretical material, culminates in a comparative analysis of environmental federalism and consideration of what each system might learn from the others. The Law and Policy of Environmental Federalism includes clear descriptive portions that make it a valuable teaching resource, as well as original theory and a

depth of policy analysis that will benefit scholars of federalism or environmental and natural resources law. The value of its analysis for real-world decision-making will make it a compelling read for practitioners in environmental law or fields concerned with federalism issues, including those in government or NGOs, as well as lobbyists.

Understanding Influence Anchor Stephen King's legendary debut, the bestselling smash hit that put him on the map as one of America's favorite writers "Gory and horrifying. . . . You can't put it down." —Chicago Tribune Unpopular at school and subjected to her mother's religious fanaticism at home,

Carrie White does not have it easy. But while she may be picked on by her classmates, she has a gift she's kept secret since she was a little girl: she can move things with her mind. Doors lock. Candles fall. Her ability has been both a power and a problem. And when she finds herself the recipient of a sudden act of kindness, Carrie feels like she's finally been given a chance to be normal. She hopes that the nightmare of her classmates' vicious taunts is over . . . but an unexpected and cruel prank turns her gift into a weapon of horror so destructive that the town may never recover.

The overarching objective of this book is to analyse the manner in which statebuilding-oriented research has and can influence policies in fragile, post-conflict environments. Large-scale, externally-assisted statebuilding is a relatively new and distinct foreign policy domain having risen to the forefront of the international agenda as the negative consequences of state weakness have been repeatedly revealed in the form of entrenched poverty, regional instability and serious threats to international security. Despite the increasing volume of research on statebuilding, the use and uptake of findings by those involved in

polycymaking remains largely under-examined. As such, the main themes running through the book relate to issues of research influence, use and uptake into policy. It grapples with problems associated with decision-making dynamics, knowledge management and the policy process and draws on concepts and analytical models developed within the public policy and research utilisation literature. This book will be of great interest to researchers, knowledge managers and policymakers working in the fields of post-war reconstruction, statebuilding, fragile states, stabilisation, conflict and development.

The development of computational intelligence (CI) systems was inspired by observable and imitable aspects of intelligent activity of human being and nature. The essence of the systems based on computational intelligence is to process and interpret data of various nature so that that CI is strictly connected with the increase of available data as well as capabilities of their processing, mutually supportive factors. Developed theories of computational intelligence were quickly applied in many fields of

engineering, data analysis, forecasting, biomedicine and others. They are used in images and sounds processing and identifying, signals processing, multidimensional data visualization, steering of objects, analysis of lexicographic data, requesting systems in banking, diagnostic systems, expert systems and many other practical implementations. This book consists of 15 contributed chapters by subject experts who are specialized in the various topics addressed in this book. The special chapters have been brought out in the broad areas of Control Systems, Power Electronics, Computer Science, Information Technology, modeling

and engineering applications. Special importance was given to chapters offering practical solutions and novel methods for the recent research problems in the main areas of this book, viz. Control Systems, Modeling, Computer Science, IT and engineering applications. This book will serve as a reference book for graduate students and researchers with a basic knowledge of control theory, computer science and soft-computing techniques. The resulting design procedures are emphasized using Matlab/Simulink software.

[The China White Paper, August 1949](#) Springer

The New York Times best-selling book exploring the counterproductive reactions white people have when their assumptions about race are challenged, and how these reactions maintain racial inequality. In this "vital, necessary, and beautiful book" (Michael Eric Dyson), antiracist educator Robin DiAngelo deftly illuminates the phenomenon of white

fragility and “allows us to understand racism as a practice not restricted to ‘bad people’ (Claudia Rankine). Referring to the defensive moves that white people make when challenged racially, white fragility is characterized by emotions such as anger, fear, and guilt, and by behaviors including argumentation and silence. These behaviors, in turn, function to reinstate white racial equilibrium and prevent any meaningful cross-racial dialogue. In this in-depth exploration, DiAngelo examines how white fragility develops, how it protects racial inequality, and what we can do to engage more constructively.

The Government's Public Health White Paper (Cm 6374)

VCH

Ignota Books publishes the original white paper by Satoshi Nakamoto on its tenth anniversary, providing a guide to the blockchain technology that is transforming our lives. In the wake of the 2008 financial crisis, the mysterious Satoshi Nakamoto published a revolutionary white paper that described a simple peer-to-peer electronic cash system that would later become Bitcoin. In the decade since the launch of the digital currency, the nascent blockchain technology behind Bitcoin has been heralded as having the same radical potential as the printing press or the Internet, in particular presenting extraordinary

challenges to traditional banking. Yet the paper contains no reference to existing political ideas, monetary or economic knowledge. Why? The White Paper returns to Nakamoto's canonical text as a Rosetta Stone that can serve as the compass for a rapidly shifting terrain of contemporary technopolitics. Crypto-economist Jaya Klara Brekke provides a guide and commentary, contextualising the paper for a wide readership and revealing the far-reaching implications of decentralisation. Also includes an introduction by acclaimed artist and technologist James Bridle situating Bitcoin within an obscure historical movement of

decentralisation,
showing how
blockchain is part of a

wider project to redraw
the maps of political
possibility.
