Every day, you are confronted by people,

situations, and obstacles that literally wear you down. You are bombarded by so many distractions that you have lost sight of what it means to be a Christian. The "busyness" of life has managed to

superficially fill a void within you. Is it possible to regain understanding of how you should truly be living? Could simply altering your perception of the world bring you to a more mature state of understanding? Is it possible to release the hold that evil has on you? In *Diary of a... Madman?*, you will be introduced to a philosophical perspective of living. You will gain an understanding as to why life can be so tough. You will learn how your perceptions can be misguided. You will learn how to identify the barriers that are holding you back from making the most of your spiritual journey. You will be reminded of just how special we are as creations of God and can even break the grip that evil holds on us. For correspondence, please contact madmanzdiary@gmail.com.

This timely and accessible text shows how portrayals of science in popular media—including television, movies, and social media—influence public attitudes around messages from the scientific community, affect the kinds of research that receive support, and inform perceptions of who can become a scientist. The book builds on theories of cultivation, priming, framing, and media models while drawing on years of content analyses, national surveys, and experiments. A wide variety of media genres—from Hollywood blockbusters and prime-time television shows to cable news channels and satirical comedy programs, science documentaries and children’s cartoons to Facebook posts and YouTube videos—are explored with

rigorous social science research and an engaging, accessible style. Case studies on climate change, vaccines, genetically modified foods, evolution, space exploration, and forensic DNA testing are presented alongside reflections on media stereotypes and disparities in terms of gender, race, and other social identities. *Science in the Media* illuminates how scientists and media producers can bridge gaps between the scientific community and the public, foster engagement with science, and promote an inclusive vision of science, while also highlighting how readers themselves can become more active and critical consumers of media messages about science. *Science in the Media* serves as a supplemental text for courses in science communication and

media studies, and will be of interest to anyone concerned with publicly engaged science.

Reveals the hard facts behind the laughter on TV's most popular sitcom. The highest-rated scripted show on TV, *The Big Bang Theory* often features Sheldon, Howard, Leonard, and Raj wisecracking about scientific principles as if Penny and the rest of us should know exactly what they're talking about.

The Science of TV's The Big Bang Theory lets all of us in on the punchline by breaking down the show's scientific conversations. From an explanation of why Sheldon would think 73 is the best number, to an experiment involving the physical stature of Wolowitz women, to an argument refuting Sheldon's assertion that engineers are the Oompa-Loompas of science, author Dave Zobel maintains a humorous and informative approach and gives readers enough knowledge to make them welcome on Sheldon's couch.

In *The Mad Science Book*, Reto Schneider tells the extraordinary tales of 100 of the more unusual experiments conducted across seven centuries of science. From the attempts of the 14th-century Dominican monk Theodoric von Freiberg to discover the cause of the rainbow, to the efforts of the 20th-century psychologist Harry Harlow to be the perfect mother to a family of reluctant rhesus monkeys, these are stories that are often bizarre, sometimes mind-boggling - occasionally stomach-churning - but always diverting, informative and enlightening. Among the myriad delights on display in this cabinet of scientific curiosities are the renowned

doctor from Padua who sat in a pair of scales for 30 years, recording the minutest changes in his weight; the sheep, the duck and the rooster who became the world's first air passengers; the disgusting Dr Stubbins Ffirth, who swallowed other people's vomit in an attempt to prove that yellow fever cannot be transmitted from one person to another; the hapless soldier Alexis St Martin, left with a hole in his stomach after an accident with a musket; and the ever-optimistic Charles-Édouard Brown-Séguard, who injected himself with essence of guinea pigs' testicles as an anti-ageing remedy. There is trivia here in abundance, but also quirky, but genuinely influential, science, notably Merrill Flood's and Melvin Dresher's experiments with choices of outcomes,

which have been widely influential as game theory. A fizzing cocktail of fascinating science and rich entertainment, *The Mad Science Book* tells the extraordinary stories of some truly, madly, geeky people. It should be top of every self-respecting science buff's Christmas 2008 wishlist.

"Faith is a dynamic thing, a lively thing, of asking questions and finding answers," says Danielle D'Souza. In *Y God*, she addresses more than thirty of the most interesting and pressing questions being asked about God by believers and skeptics alike. Rather than coming across as having all the answers, Danielle puts her ideas in the form of a conversation. Yet at her core she has

convictions that come from a faith rooted in her heart as well as her head. Y God will appeal to Millennials (the Y generation) and anyone who has ever had doubts about the biblical story of God. Questions include: Is faith reasonable? Are miracles really possible? Is the Bible literally true? Is God the author of morality? Are other religions false? Is America a "Christian nation"? Does anyone deserve hell? Why do people become atheists? Is science at war with religion? Is evolution compatible with the Bible? If Jesus did exist, who was he? How would Christianity change my life?

This story starts and ends in Wildwood, New Jersey, and revolves around a boy named Frankie. From childhood, Frankie Merlino hatched one moneymaking scheme after another, schemes that were not always legal. Some boys dream of being a rock star, some a doctor—Frankie had a different dream altogether. As an adult, while experiencing a creative dry spell, he stumbled upon an idea of epic proportions. Watching a report on CNN,

Frankie came up with a plan that he was certain would help him fulfill his dream. A plan designed to gain acceptance by and entry into the South Jersey mob. Aided by his best friend, Joey Vitolo, who is a minor functionary in the aforementioned organization, Frankie meets with the boss, Mr. Benecasa, and sells him on the project. I'll share with you my knowledge of trade unions, the mob's interplay in Atlantic City, and political life, along with its consequences here in New Jersey. Along the way, you will come to love two wise guys, Sal and Nino, who were dispatched by Mr. B. to convince a brilliant physicist, Dr. MacDonald, that it was in his best interest to work on the project. Dr. MacDonald, though gifted, has his own demons. He is a compulsive gambler as

well as a shameless philanderer. I have often asked why God places gifted minds in defective bodies, a true paradox of life. We'll visit Paris, Naples, Pakistan, and Rio. I'll take you to other locations on the Jersey shore, and just maybe, I can change your perception of the Garden State. On a lighter note, how would you like to be able to smell the wonderful food at Maria's, the restaurant where much of the planning takes place? I'll help you visualize the largest boardwalk in the Western hemisphere. We'll stroll down wide clean beaches, and quite possibly, I can take you back to your childhood with memories of amusement rides. This tale has a dark side however with intrigue, corruption, terrorists and . . . well for the rest, you'll just have to read this book. By the way,

if the terms “towel head” or “camel jockey” offend you, I suggest you move along to the romance section. Father Kelly

"Talking with Jessica, I realized how easy it had been for me to kind of put all 12 years of my time on Big Bang Theory under one general umbrella, as it were. The questions she asked and the information she'd reveal to me from someone else she'd interviewed forced me into a frame of mind where each season - and sometimes each episode - became it's own, separate entity again. . . Frankly, it turned into a version of therapy I hadn't realized I'd needed and

couldn't have known how much I'd enjoy." —Jim Parsons

Written by an expert in media, popular culture, gender, and sexuality, this book surveys the common archetypes of Internet users—from geeks, nerds, and gamers to hackers, scammers, and predators—and assesses what these stereotypes reveal about our culture's attitudes regarding gender, technology, intimacy, and identity. • Provides exhaustively researched and richly detailed information about the interplay between media representations of Internet users and gender, politics,

technology, and society that is fascinating and fun to read • Presents findings that suggest that in spite of the Internet being so prevalent, technophobia is still an inherent subtext of many pop culture references to it • Considers how the vast majority of the portrayals of Internet user stereotypes are male—and evaluates how these male-dominated roles shape and are shaped by popular attitudes about sexuality, technology, intimacy, and identity • Written by Lauren Rosewarne, a widely published expert in the areas of modern media, popular culture, gender, and sexuality

Exploring the C-SPAN Archives is a collection of path-breaking research studies that use video drawn from the C-SPAN Archives. The book, based on the

papers presented at a November 2014 conference, includes chapters that explore issues in presidential debates, minority representation, the presentation of the first ladies, stem research, and innovative ways to analyze video. The book is divided into five parts: Part 1 consists of an overview of and common scholarship using the C-SPAN Archives and how this research advances the conversation after previously published studies. Featured are the ways in which the collection is indexed and tips on how individuals can find particular materials. This section is essential for increased scholarship and pragmatic applications. Part 2 contains applied research using the video collection. Topics in this section include a look at oral histories of minority

members of Congress, an analysis of presidential debates, and the presentation style of Michelle Obama. Part 3 is focused on STEM research, including concepts and contradictions in the debate over STEM initiatives, expertise and evidence in science presentations in the C-SPAN Archives, and the framing of technology issues in a C-SPAN television series, *The Communicators*. Part 4 presents innovative research using C-SPAN and new computer technology. Two scholars take different technical approaches to evaluate polarization and communication using audio levels and video images. Finally, in Part 5, David Caputo presents ideas on the value of massive open online courses (MOOCs) using C-SPAN and reflects on the use of

C-SPAN for citizen education in what he terms the "postdigital world." Additionally, Patrice Buzzanell

contributes a reflective essay on the future directions of research using the C-SPAN Archives based on the essays in this volume.
